Overview

This section of the report discusses the architecture of testing/protocols/facilities that are needed to support energy storage from lab (readiness assessment of pre-market systems) to grid deployment (commissioning and performance testing). As part of the World Bank Energy Storage Partnership, this document seeks to provide support and knowledge to a set of stakeholders across the developing world as we all seek to analyze the emerging opportunities and technologies for energy storage in the electric sector. As global prices for. These performance constraints can be found experimentally through specific testing procedures. Introduction Battery energy storage systems (BESSs) are being installed in. To support consistent characterization of energy storage system (ESS) performance and functionality, EPRI—in concert with numerous utilities, ESS suppliers, integrators, and research organizations participating in the Energy Storage Integration Council (ESIC)—has developed a reference test manual. Our testing laboratories are A2LA and ISO/IEC 17025-accredited, and our global expertise enables us to support clients worldwide. The importance of testing and certification.
