Overview

According to the National Renewable Energy Laboratory's Spring 2025 Solar Industry Update, residential solar costs average around \$2. Factors affecting cost per watt include: Prices for TOPCon cells will be based on an efficiency of 24. 0%+ efficiency due to production line optimization and efficiency improvement from October 23, 2024. Global estimates are used before 2010; European market benchmarks thereafter due to limited data availability. Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or other system. LCOE (Levelized Cost of Electricity) is a key metric used to compare the cost of generating electricity from different energy sources, including solar PV, wind, fossil fuels, and nuclear power. 56 per watt on average, with systems ranging from \$20,000-\$30,000 before incentives. Combined with the tax credit, homeowners can achieve payback periods of just 6-10 years. Significant Regional Variations: Solar costs vary.
