## Overview

Solar battery storage is a huge step towards energy independence. It gives you the ability to store up electricity to use in your home when you really need it. For example, you could store electricity generated via your solar panels during the day to use at night. If you haven't got a battery, the electricity you don't use. Solar panels are only able to produce electricity when sunlight is present. This, therefore, creates an obvious issue when it's dark and you still need energy for your home. In this case, you. People are choosing to have a solar battery alongside their solar panels all the time - and those who didn't get one installed with their panels are having them retrofitted. It's for good reason; there are plenty of benefits to. With more and more companies producing solar batteries, you have a reasonably wide choice and flexibility over prices and the system you choose. It seems like an obvious choice to use battery storage if you've already got solar panels. Luckily, if you've already got solar panels, it's pretty easy to.
