

Solar power household electricity bill

Overview

Solar panels will reduce the amount of energy used on your electricity bill. Your electricity supplier won't tell you how much solar energy you've used in any given month - the overall amount of electricity you've used will simply go down. So the electricity bill that comes after your solar panels are installed will be. You don't need to tell your energy supplier that you have solar panels- unless you want to use its SEG tariff. There's no other reason to let your energy. Your solar panels almost certainly won't cover your entire electricity bill. For at least half the year, a properly sized solar installation will supply enough electricity to cover the average. You now have all the knowledge you need about how solar panels interact with your electricity bill. The next step is to get quotes for your own panels. Just provide a few quick details about your property, and we'll put you in touch with. The average electricity bill for a three-bedroom household with a 3.5 kWp system is £236 per year. This represents a 70% saving on the amount the same home would pay for.

Article Content
