

Us rooftop solar power generation system

Overview

We provide a detailed estimate of the technical potential of rooftop solar photovoltaic (PV) electricity generation throughout the contiguous United States. Rooftop solar power has transformed from a niche technology into a mainstream energy solution, with over 4.4 million American homes now powered by solar panels. Many areas offer attractive Renewable Energy Credits (RECs) that, when coupled with federal and local incentives, can make rooftop solar an attractive financial choice that is also good for the environment. The glass solar tiles and steel roofing tiles look great up close and from the street, complementing your home's natural styling. Schedule a virtual consultation with a Tesla Advisor to learn more. Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. Rooftop potential is not equivalent to the economic or market potential for rooftop solar—it doesn't consider availability or cost. We expect both small-scale and utility-scale solar to continue growing through 2024.

Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2024, utility-scale solar power generated 219.8 terawatt-hours (TWh) in the United States. Total solar generation that year, including estimated small-scale photovoltaic generation, was 303.8 TWh. As of the end of 2024, the United States had 239 gigawatts (GW) of installed photovol...
